Introducing...WMISCan!

The World Molecular Imaging Society has launched a new Canadian chapter called WMISCan. With this partnership, some of the established and emerging strengths of Canadian molecular imaging research broadly spanning pre-clinical and clinical applications will be showcased in the Society and at WMIC.

WMISCan will host an inaugural pre-conference full-day workshop, spotlight session and breakfast at WMIC 2019. A taste of the breadth of imaging innovations from the Great White North will be presented: radiometals in imaging and therapeutics, contrast agents and applications of MRI, and minimally invasive imaging for diagnostic and surgical medicine. These exciting topics will come together in a brief panel discussion with our invited experts, where opportunities and the future of Canadian imaging innovations will be addressed.
